

REELBEAN 5

ReelBean is a multi-purpose video application that can be used to convert, play, edit and extract video files and tracks. ReelBean supports all the popular video and audio formats and can convert between them. Use ReelBean to perform other tasks such as extracting individual audio or video tracks from your video files into new separate files. ReelBean will display selectable chapter info if it exists in the video files, and creates a separate

scenes drawer if it doesn't. Also use ReelBean to record video and/or audio, and perform numerous editing operations on your video files. ReelBean 5 runs on Mac OS X 10.5 Leopard and Mac OS X 10.6 Snow Leopard, and provides all the functionality that was once part of QuickTime Pro on Mac OS X 10.5 and that Apple no longer includes in QuickTime on Snow Leopard, effectively giving you an equivalent of QuickTime Pro on Snow Leopard.

REELBEAN 5
